

Product Specifications

16 GA. SOLID SHEET-STEEL INFILL

Solid sheet-steel infill conceals stored belongings and provides a closed panel surface. It is an alternative to open mesh for tenant-locker panels and backs where privacy is a priority. Solid infill does not provide through-panel airflow; coordinate ventilation and the complete enclosure with the project.

Material sample shown for identification.
Appearance and scale are illustrative.

Ordering information

Include the mesh or sheet designation, panel dimensions, framing, finish, quantity, and application with your request. The quote and approved drawings establish the final construction.

Category	Specification
Infill type	Solid sheet steel
Sheet gauge	16 gauge
Thickness	Nominal gauge; confirm material standard and thickness tolerance
Material	Carbon steel
Open area	0% through the solid sheet
Visibility	Opaque; conceals stored contents
Airflow	No through-panel airflow
Finish options	Painted enamel; powder coating and galvanizing subject to project review
Panel compatibility	Project-specific framed panels and locker backs
Panel sizes	Fabricated to approved project dimensions
Applications	Privacy panels, tenant-locker infill and rear closures
